10 AI Automation Blueprints for Small Business

Ready to sell, ready to build. Each one fits in a single day and earns a monthly fee.

N3mak Services

You may use these blueprints in your own client work.

Do not resell the document itself.

How to use this pack

1. Pick the blueprint that matches a business you already know.
2. Copy the prompt, replace {COMPANY} and the knowledge file with real data.
3. Build it once, test it on 20 real messages.
4. Charge a setup fee plus a monthly fee. Never sell it as a one off.
5. Keep the knowledge file current. That upkeep is what the monthly fee pays for.

The one rule that decides success

Sell the outcome, not the technology. A shop owner does not buy an LLM. They buy 'my messages get answered in seconds and I stop losing orders at night'.

BLUEPRINT 01

Customer support assistant that never sleeps

The pain

A 3-person shop answers the same 20 questions daily on WhatsApp.

The fix

Connect the shop's number to an AI assistant trained on the product list, FAQ and delivery policy. It answers instantly, and hands over to a human when it detects anger or a refund request.

Stack

WhatsApp Business API + an LLM + a 2 page knowledge file

Prompt to copy

```
You are a support agent for {COMPANY}. Answer in the customer's language, max 4 lines. Use only the facts in the attached knowledge file. If unsure or if the customer mentions refund or legal, reply that a human will follow up and tag the chat.
```

Deploy time

1 day to deploy, 20 minutes per week to keep the knowledge file current.

What to charge

$400 setup + $120/month

BLUEPRINT 02

Invoice and receipt automation

The pain

Receipts arrive as photos in chat and get retyped into a spreadsheet.

The fix

Forward every receipt photo to a bot. It reads the total, vendor, date and tax, then appends a row to a spreadsheet and files the image in a dated folder.

Stack

Telegram bot + vision LLM + Google Sheets

Prompt to copy

```
Read this receipt image. Return only JSON: vendor, date (YYYY-MM-DD), total, currency, tax, category. If a field is unreadable return null for it.
```

Deploy time

Half a day. Saves 3 to 5 hours a week.

What to charge

$250 setup + $60/month

BLUEPRINT 03

Lead qualifier in Telegram

The pain

Inbound messages are answered hours later and half of them go cold.

The fix

A bot asks 4 qualifying questions, scores the lead 1 to 10, and pushes qualified ones to the owner with a one line summary. Cold ones get a polite template answer.

Stack

Telegram bot + LLM + a simple database

Prompt to copy

```
You are a sales qualifier for {COMPANY}. Ask these 4 questions one at a time: need, budget range, timeline, decision maker. Then output a score from 1 to 10 and a 25 word summary for the owner.
```

Deploy time

1 day. First reply drops from hours to seconds.

What to charge

$350 setup + $100/month

BLUEPRINT 04

Content engine for one niche

The pain

Posting stops whenever the owner gets busy.

The fix

A weekly job generates 7 posts from a single source article plus the brand voice file, and schedules them.

Stack

An LLM + a scheduler + a brand voice file

Prompt to copy

```
Write 7 short posts for {BRAND} from this article. Voice: {VOICE}. No hashtags, no emojis, max 60 words each, one clear takeaway per post.
```

Deploy time

2 hours once, then fully automatic.

What to charge

$300 setup + $80/month

BLUEPRINT 05

Quote generator from a chat

The pain

Quotes take 40 minutes each and are inconsistent.

The fix

Owner sends requirements in chat, the assistant returns a formatted quote with line items, terms and a validity date, ready to send.

Stack

Telegram bot + LLM + a price table file

Prompt to copy

```
Build a quote for {COMPANY} from this request. Use only prices from the price table. Output: item, quantity, unit price, line total, subtotal, tax, total, validity 14 days. Never invent a discount.
```

Deploy time

1 day. Cuts quote time to under 3 minutes.

What to charge

$350 setup + $90/month

BLUEPRINT 06

Watchdog for competitor prices

The pain

Prices change silently and margins erode.

The fix

A daily check reads 5 competitor pages, records changes, and alerts only when a price moves more than 5 percent.

Stack

A scraper job + a database + an alert bot

Prompt to copy

```
Extract product name, price and currency as JSON from this page. Return an empty array if the page has no prices.
```

Deploy time

1 day. Alerts only when something matters.

What to charge

$300 setup + $70/month

BLUEPRINT 07

Onboarding sequence for new clients

The pain

New clients get forgotten in the first week, then churn.

The fix

On signup, a sequence sends 4 messages over 10 days, each with one action, and stops automatically when the client replies.

Stack

A form + a scheduled bot + a stop condition

Prompt to copy

```
Write message {N} of 4 for a new {SERVICE} client. Goal: one small action. Max 3 sentences. No sales pitch.
```

Deploy time

Half a day. Reduces first month churn.

What to charge

$250 setup + $60/month

BLUEPRINT 08

Meeting notes to action items

The pain

Meetings end without assigned tasks.

The fix

Upload a recording or transcript, receive a summary plus tasks with owner and due date, pushed into the task board.

Stack

Transcription + LLM + task board API

Prompt to copy

```
From this transcript, output: 5 line summary, decisions, and tasks as JSON with owner, task, due date. Mark missing owners as UNASSIGNED.
```

Deploy time

1 day. Removes manual note taking.

What to charge

$300 setup + $70/month

BLUEPRINT 09

Multilingual product support

The pain

Foreign customers write in English and nobody answers fast.

The fix

Every inbound message is auto translated to the owner's language, answered, then translated back in the customer's language.

Stack

Bot + LLM translation layer

Prompt to copy

```
Detect the language, answer in that language, and also give the owner a one line translation of the customer request.
```

Deploy time

Half a day. Opens cross border sales.

What to charge

$250 setup + $60/month

BLUEPRINT 10

Weekly numbers digest

The pain

The owner never looks at dashboards.

The fix

Every Monday at 8am the assistant pulls sales, orders and messages from the last week, writes 5 bullet points and sends them in chat with one recommended action.

Stack

Two data sources + LLM + a scheduled job

Prompt to copy

```
Write a 5 bullet weekly digest from this data for the owner. Last bullet must be one concrete action to take this week, based on the numbers only.
```

Deploy time

1 day. One message replaces a dashboard.

What to charge

$250 setup + $60/month

Pricing that sticks

Item	Reason
$250 to $400 setup	One automation replaces 3 to 5 hours of weekly manual work.
$60 to $120 monthly	Hosting plus upkeep. It is a subscription, not a favour.
$900 to $1,500 bundle	Three blueprints together, sold as a starter system.

First client script

Hi {NAME}, I built an assistant that answers your WhatsApp questions in seconds and hands over the big ones to you. It takes one day to set up and costs {PRICE} to start, {MONTHLY} after. Want me to set it up on your real messages this week and you keep it only if it works?
